

# Contents

*Chapters build in order. Each names what it assumes, so you can also read across to what you need.*

## Before You Start: Where C++ Engineers Fit in Electronic Trading

### MODULE A · SYSTEM CONTEXT, DOMAIN MODEL, AND PERFORMANCE REASONING

- 1 **From Exchange Packet to Trade — Anatomy of an Electronic Trading System**  
From Exchange Packet to Trade — Anatomy of an Electronic Trading System
- 2 **The Order You Cannot See**  
Order lifecycle and state machines
- 3 **The Worst Microsecond of the Day**  
Latency, tail latency, jitter, and throughput
- 4 **The Regression the Profiler Cannot See**  
Measurement, benchmarking, and performance diagnosis
- 5 **Fetching a Kilobyte to Read a Price**  
CPU cache locality and data-oriented layout
- 6 **Four Threads, One Core's Worth of Work**  
Cache coherence and false sharing

### MODULE B · C++ CONCURRENCY AND COMMUNICATION

- 7 **The Counter That Lost Count**  
Threads, atomics, and locks: the tools of concurrency
- 8 **Waiting for the Market to Move**  
Busy spinning, blocking, and hybrid waiting
- 9 **What the Other Thread Can See**  
C++ memory-model foundations
- 10 **The Handoff That Cannot Block**  
SPSC ring buffers
- 11 **When One Thread Stops, What Happens to the Rest**  
Blocking, lock-free, and wait-free progress guarantees
- 12 **When Everyone Wants the Same Cache Line**  
MPSC queues and contention
- 13 **The Cost of Asking Which Strategy**  
Dispatch and polymorphism on the hot path
- 14 **The Bug That Passes Every Test**  
Testing concurrent and lock-free code

### MODULE C · MEMORY AND MACHINE TOPOLOGY

- 15 **The Latency Spike at 09:30**  
Virtual memory, page faults, huge pages, and TLBs
- 16 **Never Ask the Allocator During Market Hours**  
Preallocation and object pools
- 17 **Free Everything at Once**  
Arenas, slabs, and custom allocators
- 18 **Counting the Copies**  
mmap, shared memory, and zero-copy claims
- 19 **Where Your Thread Actually Runs**  
Thread affinity and scheduler interaction
- 20 **The Server Upgrade That Made Things Worse**  
NUMA-aware placement

### MODULE D · NETWORKS, PROTOCOLS, AND TIME

- 21 **Reading the Wire**  
Market data and exchange protocols
- 22 **Why the Exchange Does Not Reply to You**  
TCP, UDP, and multicast in trading systems
- 23 **The Book That Is Silently Wrong**  
Sequence numbers, gap detection, and recovery
- 24 **When the Market Outruns You**  
Hot-path networking, batching, and overload

- 25 **Whose Clock Was That?**  
Clock synchronisation, timestamp semantics, and time domains
- 26 **Taking the Kernel Out of the Path**  
Kernel bypass and user-space networking
- Appendix **The Control Plane**  
WebSocket, HTTP polling, and venue APIs

## MODULE E · ORDERS, BOOKS, RISK, AND CORRECTNESS

- 28 **The Structure Everything Reads**  
Order-book representation and construction
- 29 **Sending It Twice**  
Idempotency, duplicate handling, and retry semantics
- 30 **The Check You Cannot Skip**  
Pre-trade risk-engine foundations
- 31 **What Did It See, and Why Did It Do That?**  
Deterministic replay and incident reconstruction
