No warranty, and not advice

This book is educational material about software engineering. It is not investment, financial, legal, or compliance advice, and nothing in it should be relied upon as such.

Trading systems operate under obligations that differ by jurisdiction, by venue, and over time. Where this book describes regulatory or venue behaviour it does so in general terms and as of the date of publication; the applicable rules and the relevant venue specifications are the authority, and they must be read directly.

Code is provided as illustration. It is written for clarity rather than for production use, and it comes with no warranty of any kind. Test anything you intend to run.

Product and company names mentioned are the trademarks of their respective owners, used here for identification only. No affiliation or endorsement is implied.

Corrections and updates

Corrections, updates, and new material are posted on RedNote at **@HFTDevLab**. If you find an error, please report it there — the next edition is better because readers do.
